

Climate, environment and circular economy

CO₂ capture, utilization and storage

CO₂ CAPTURE, UTILIZATION AND

STORAGE OUR STRENGTHS

Long-standing expertise in the field of [gas treatment](#) with a focus now on CO₂ capture processes.

A **pioneer** in the development of post-combustion capture technologies, notably steering the European [CASTOR project](#).

Unique **experimental facilities** for CLC oxycombustion capture technology:

- o cold model
- o 10kW pilot
- o atomizer for particle production

Exhaustive **geoscience** expertise enabling us to propose solutions for **large-scale and secure CO₂ storage**: validated expertise throughout the storage chain, via numerous collaborative projects including:

- screening of an aquifer (the Ademe France Nord project)
- assessment of storage sites (European [SiteChar project](#), coordinated by IFPEN and winner of the Etoiles de l'Europe award)

- monitoring and surveillance of a storage facility (European [CO₂Remove project](#))
- abandonment study (European [CO₂Care project](#))
- long-term surveillance tools (European [Mirecol project](#))

Expertise in the field of [Life Cycle Analysis](#) enabling an exhaustive technical, economic and environmental approach to CCUS research.

CONTACTS

Raphaël Huyghe

Program manager "CO₂ capture and storage"

raphael.huyghe@ifpen.fr

Antonio Pires Da Cruz

Program manager "Decarbonization and conversion of CO₂"

antonio.pires-da-cruz@ifpen.fr
